ained goal by goal over their opponents the crowd gradually increased to a veritable enthusiasm, and when the final goal went home gave the game in the bag for the boys the cheering could be heard a mile or less.

At times the local team certainly showed a superior form, and in fact had a fine lineup, but it did well to win. Inland team was much heavier team than this. Local but our boys can "take it." We look forward to seeing the home team in the next game. It is hoped that more fans are needed at the game to give them the necessary encouragement.

The team is now in the hands of prominent coach brought in from the University of Washington for training and regular practices. Good management is to be congratulated for this move as a coach will not only help the older players on the team but will prove of inestimable value to the young players just starting on the team this year.

Don't miss any of the games—remember it is a 100 percent Lacey hockey team. Support them.

HIGH SCHOOL REUNION

The Annual High School Reunion will be held in the Assembly Hall December 26, 1934. Each student and ex-student may invite one visitor.

Good music by Ray Paulsen of His Orchestra. Tickets at 50c. See may be procured from the following: Committee: Ed Caruthers, Pat McCafferty, Max Grogan, Joe Rees, Pat Hay, Kay Craig, Len Todd, Tom Caruthers, Allan Caruthers, Harry Wright.

More Visitors To Alberta

Increasing Number of Tourists In-
creasing Province Each Year

Alberta enjoyed a substantial increase in tourist traffic during the past season, judging by the volume of traffic handled through the ports of entry and in the various national parks in the province. Total figures would indicate the number of visitors to national parks as being over 200,000, including provincial as well as outside travellers, as compared with a figure of 175,000 last year. Most of these visitors came by motor car. At Banff Park nearly 70,000 persons in cars passed through the east gate this season, which was an increase over last year. Waterton Park had a total of over 30,000 visitors, while Jasper Park west of Edmonton had nearly 10,000 visitors. Waterton Park was visited by some 10,000 persons during the summer, and Elk Island Park, which is becoming increasingly popular as a picnic ground, had over 40,000 visitors compared with about 30,000 last year.

At the two ports of entry at Calgary and Colesburg on the International Border a considerable increase was shown in the number of cars passing through. At Colesburg 39,432 persons were handled in the five months from April to August inclusive compared with 27,587 in 1932, and at Calgary 8,539 cars were handled with 30,398 persons in the five months compared with 6,525 cars and 22,347 persons in 1932.

Alberta has many attractions to offer tourists. In this province mountains and prairie scenery, and it has in the innermost portion of the Northern Canadian Rockies a territory of sheer beauty and mountain grandeur. With this great mountain region within its borders, Alberta possesses what is probably the largest mountain area in the world east of the Rocky Mountains. In the Alberta Rockies more than 8,000 square miles have been preserved as national parks.

Old Railway Ticket Valid

Denationalization Ticket Issued in 1919

When the war ended William Phillips was given a railway ticket and a meal ticket which would take him back to his home in Vancouver. Now he is going to use them.

Phillips went to the railway station at Sarnia and showed a clerk the denationalization ticket issued in 1919 and said he wanted to go back to Vancouver, where he enlisted with the Eighth Canadian Mounted Rifles when the war broke out.

Federal officials were communicated with and it was decided the ticket was valid. In 1919 the ticket was not good but the railway was instructed by the government to supply Phillips with free meals on his trip. He will leave before the end of the month.

United States Sends Protest

Complaints To Persia Regarding Treatment of Aviators

The United States has formally protested to Persia against the reported discourtesy shown there recently to two United States entrants in the England-Australia air race.

In a note that made no pretence of friendliness, detailing the treatment accorded John H. Wright and John Polando when they made a forced landing, Oct. 23, between Mohammer and Abadan because of minor engine trouble, the United States said it was "at a loss to understand the action of the Persian authorities."

Although granted Persian permission to fly across that country and land there if necessary, Wright and Polando were detained 24 hours and subsequently withdrew from the race at Karachi, India.

Russia's Productions From Natural Resources

Moscow's World-Beating Dreams Are Beginning To Come True

Soviet Russia leaps toward the head of the list of nations in production from natural resources. In output of pig iron Russia will reach 10,000,000 tons before the expiration of 1934, enabling it to displace Germany as second to the United States. In production of steel and rolled metal, with a showing of more than 10,000,000 tons, Russia displaces Britain and is exceeded only by the United States and Germany. In another year, claim the Moscow authorities, Russia will stand next to America in each respect. Russia's tremendous human machine begins to work with something like smoothness at last—some of Moscow's world-beating dreams begin to come true.

Largest Living Thing

It has been "General Sherman," a Sequoia tree reputed to be the world's largest living thing, exceeds 600,000 board feet. The tree stands 273 feet tall and has a base diameter of 37 feet.

Up to the end of October, the number of pedigree certified registered in 1934 with the Canadian Livestock Records and approved by the Dominion Minister of Agriculture was 2,200 horses; 27,900 cattle; 6,980 sheep; 6,119 swine; 8,417 goats; 6,297 dogs; 1,181 poultry; and 87 geese.

Bad Weather Hard On Human Skin

Cold, wind, rain and snow are the cause of much irritation and discomfort, neck and face. Bad weather dries up the skin; causes dryness and irritation; and eventually cracking and chapping.

Since 1875, millions of men and women have relied on Hinds Honey and Cream for greater skin protection and relief. Hinds Honey and Cream gives relief immediately upon application. It soothes, softens, cleans, chaps skin, cooling and taking the sting right out.

Applied before exposure, Hinds Honey and Cream supplies added moisture to your skin, protecting it from windburn and raw, damp air. Use Hinds Honey on your face and hands immediately after washing. Sold at all drug stores.

Would Amend Criminal Code

St. John Coroner Recommends New Law For Motorists Who Kill

"I am forced to the conclusion that one of our greatest needs is to modify our criminal code," Dr. C. L. Emerson, St. John city and county coroner, said in a letter published in the St. John N.B. Pointing out the difficulty of obtaining convictions under the existing law in cases of death due to automobile accidents, he suggested a new law less severe than that covering manslaughter, but sufficiently severe to prove a deterrent to those motorists inclined to disregard public safety.

"There are only two charges that may be laid against an individual causing death, namely, murder and manslaughter," wrote Dr. Emerson. "It seems to me that manslaughter is so severe that it is virtually impossible to get a trial jury to convict."

If the crime were classed not as manslaughter but as some lesser crime, with a correspondingly less severe punishment, yet sufficient to emphasize the gravity of the offense, I am of the opinion that more persons criminally responsible for the death of others in motor accidents would receive just punishment."

The coroner agreed with a suggestion that all cars involved in fatal accidents should immediately be impounded by police pending an examination of the brakes and other equipment.

Canadian Live Poultry For France

Two Hundred White Leghorns Shipped To Poultry Farm In France

Fifty white Leghorn cockerels and 150 pullets purchased from R.O.P. breeders in Western Ontario by L'Abbe A. Deckmyn, of Villers-En-Vexin, Eure, France, were shipped from Montreal direct to France per the S. S. Lata, on November 15th. This consignment of white Leghorns will be used for breeding purposes on the large poultry farm managed by Abbe Deckmyn. Recently he came to Eastern Canada primarily to acquaint himself with the methods of poultry raising and the quality of the stock in this country and he was much impressed.

The recent sale is a result of contacts made by officers of the Dominion Department of Agriculture at the World's Poultry Congress in London and Rome.

Has One Advantage

If an eagle can make only 120 miles an hour in flight, the airplane has smashed its speed record many times. But the bird still has one advantage over its mechanical rival. It can sleep and roost on a mountain side without cranking up.

Probably the most accurate clocks in the world are two at Greenwich Observatory, in England. Each is checked every 30 seconds by a pendulum swinging in a vacuum.

FAMOUS "SLEUTH" COMPETES IN TRIALS

Water By Sound

Here we see Mrs. Sadler with her bloodhound "Marquis of Barchester," as they attended the Association of Bloodhound Breeders' Open Trials in Cambridgebridge, England. Mrs. Sadler often assists British police in searching for missing persons, and she recently broke into the news when her dogs tracked a man who was wanted in Sussex for a shooting affray. The "Marquis" and his mate piloted Mrs. Sadler and the police to the alleged culprit's lair, and when the man found escape cut off he shot himself.

Fifteen Times Around World

New York Man Cycles Two Million Miles In 35 Years

Marco Polo was a Sunday excursionist compared with Julius Brittlebank, 76-year-old New Yorker, who is completing his fifteen journey round the world.

He has travelled two million miles in 35 years, and estimates he has spent \$100,000 on fares alone.

Brittlebank retired from business in 1911. Even before retiring he had done a great deal of travelling, but as soon as he had cast off the shackles of daily trade he set about being a full-time globe-trotter.

Now he is known by ship captains on all the seven seas, and hotel registers in every country, except Iceland and Siberia, contain his signature.

Yet Brittlebank admits he has never been on a ship without being asked. Also that he has Marco Polo's round the world with a knowledge of only two languages—"English and profane." He said:

"I travel around with a 40-year-old trunk, a couple of grips and a letter of credit, and I've never lost anything. I've only gained experience and pleasure and an increased zest for living. Here to-day and gone to-morrow."

"I don't make plans. Those things always go wrong."

He believes that travel keeps him young, and that it is the finest antidote he knows for old age. He added:

"It gets better every time and I get new thrills every time. There is always one darn thing after another."

Canada's Destitute Blind

No Provision Yet Made In Regard To Pension

Canada takes far better care of her criminals than of her destitute blind, Philip E. Layton, president and founder of the Montreal Association for the Blind, declared at the 20th annual meeting.

Australian blind received a pension at the age of 18, he explained. New Zealand has also devised effective legislation to insure the welfare of her blind population. Not only did blind people receive a pension in Great Britain, but the earnings of blind workers were supplemented by the government and this was done despite the heavy taxation burden placed on the shoulders of the British people, Mr. Layton commented. Both in Northern Ireland and the Free State pensions were granted to the blind.

In Canada there is no system of pension for the blind. The way of the blind was particularly hard. Even those who hold university degrees or diplomas for the teaching of music or have the necessary qualifications for tuning musical instruments, find it most difficult to obtain positions, he said.

Simplest And Best Way

England Is Using Surplus Milk To Feed Children

"The simplest and best way of getting rid of a surplus of milk is to get that surplus drunk. We don't want to turn it into buttons or studs for the back of our necks," said Walter Elliot, Minister for Agriculture, when he spoke to a meeting of Unionist teachers in Glasgow. Speaking of his recently launched scheme to give a child milk at school each day, Mr. Elliot hinted that it need be introduced to Scotland in the near future. "No doubt," he said, "proposals will be worked out before very long in Scotland. We have at present in England 1,000,000 children getting milk every day, and we have not ourselves if possible, to raise that figure to 3,000,000 by Easter of next year."—Glasgow Herald.

New Plan Helps Mothers Solve Problem of Colds

Mothers Adopt Plan by the Makers of Vicks VapoRub for Better Control of Colds in the Home.

Introduced with the Remarkable New Aid in Preventing Colds—Vicks Vapo-nol

Every mother is burdened with the problem of colds—especially the frequent colds of children. It is sood news indeed, then, that the makers of Vicks VapoRub have perfected a Plan for Better Control of Colds in the Home. The helpfulness of Vicks Plan in reducing the number and duration of colds has been tested by physicians—and proved in everyday home use by thousands.

Trial Offer to Vicks Users
Vicks Plan is introduced along with the new Vicks Vapo-nol, based on a new idea for preventing colds—namely, to Vicks Vapo-nol Rub, the modern method of treating colds. Get a bottle of the new preparation and keep it beside your bed of Vapo-nol—for use as directed below. Unless you are delighted with it, return your receipt to the authorized to refund your money.

Here, briefly, is how Vicks Plan works:
To Help Prevent Many Colds
When children come in sniffing and sneezing, apply Vicks Vapo-nol to each nostril. The Vapo-nol soothes at that first scratchy, sneezy irritation of the nose and upper throat. Vapo-nol stimulates the functions Nature has provided—in the nose—to prevent colds, and to throw colds in their early stages. It's time to use helps to avoid many colds entirely.

To Help Shorten a Cold
If a cold strikes without warning, or arises by every precaution (as some colds always will) depend on Vicks Vapo-nol. Just rub it on throat and chest. It attacks the cold direct—two ways at once—by stimulating the blood, and by relaxing the inflamed membranes direct to inflamed air-passages. This combined action loosens phlegm, soothes irritated membranes, helps break congestion.

Together with the use of these two products, Vicks Plan contains certain simple rules of health for building resistance to colds. Have your family follow Vicks Plan and hold them to greater freedom from colds. Full details of the Plan are in each Vicks package.

YOUR HANDWRITING REVEALS SECRETS OF YOUR CHARACTER

By LAWRENCE HILBERT (Grapho-Analysis)

(All Rights Reserved)

(Editor's Note: Many letters of appreciation have been received from readers, who find these articles on Character from Handwriting, fascinating and of absorbing interest. Read the authors offer to you at the end of this article.)

Oh, was some power the gift of fate To see ourself as others see us!—Burns.

Burns spoke truly when, in those memorable lines, he expressed the possibility of reaching to really know ourselves. Grapho-Analysis provides the key that opens the door of self-knowledge.

Nearly a year ago, a young lady wrote to me, and explained that she could not keep her friends. She was good-looking, and cultured, and had a good personality. She could make friends—but she could not keep them!

A glance at her handwriting suggested the reason. Her letters were full of inducement to marasmus, and her wit was rather biting. No wonder she lost her friends. I told her the truth. I suggested that she curb this tendency, and cultivate a more sympathetic demeanour towards people.

Not so long ago, I had a letter from her, in which she expressed her gratitude for my advice, and told me that she no longer found her friends deserting her. She had cured herself of her sarcastic habit.

The unfortunate thing about bad habits is that, in many instances, we do not know we are guilty. A friendly suggestion often opens our eyes to the truth.

That is where the Grapho-Analysis is able to be of great help to you. B.J. Winnipeg—You have a very great amount of energy. Of course, it will not be easy, but it is worth the effort. As it is now, you are not being true to your own nature, and you are likely to do things, and say things, that you will bitterly regret afterwards.

W. L. Regina—Yours is a very reserved nature. You feel things readily, but you are backward in expressing them. In your case, I advise you to reserve all to a point of coolness, and alternate friends, against your friends. You carry in your case lies within yourself. Try and cultivate a more open and friendly disposition. Be sympathetic towards people and their troubles. You do not have to be gushing; in fact, you never could be. But you can show your interest in people and sympathize with them. You will find that people will reciprocate, and you will be better liked. At the present time, you do feel for those people and their worries, but you do not show this feeling.

Do you want to know the weak points in your character? The author will tell you what you are really like. And would you like to know what your friends really are? Send specimens of the writing you want analysed, and enclose 10c coin for each specimen. Send with St. stamped addressed envelope, to: Lawrence Hilbert, care of Winnipeg Newspaper Union, 175 McDermott Ave., Winnipeg, Man. Letters are entirely confidential, and replies will be forwarded as soon as possible, but please allow at least two weeks for your reply.

New Aid To Sailors

Device Measures Depth Of Shallow Water By Sound

A sound so shrill that it cannot be heard, which measures the depth of shallow water almost as accurately as a foot rule, is science's newest aid to sailors and navigators, announced by the U.S. Coast and Geodetic Survey. The new device called the "shoal fathometer," is expected to be an important aid to ships navigating in shoal water and in making charts of the bottom in shallow-water areas.

There is a heavy public demand for information from the Dominion Entomological Branch on such subjects as improved sprays for household insects, moth-proofing chemicals and cleaning appliances, notably vacuum cleaners, in eliminating and controlling clothes moths and carpet beetles.

Anti-Grasshopper Campaign

Estimate Of Wheat Saved In Western Provinces Is 25,385,000 bushels

The anti-grasshopper campaign saved \$17,768,000 for farmers of all three prairie provinces, according to a Searle Grain Company report. The estimate of wheat saved for Alberta, Saskatchewan and Manitoba was 25,385,000 bushels.

Unofficial information gives the cost of fighting the grasshopper pest in all three provinces as considerably less than \$1,000,000.

Alberta's campaign accomplished the greatest saving of the three provinces; 11,330,000 bushels or 18.11 per cent. of the harvest.

Saskatchewan saved 9,632,000 bushels or 21.59 per cent. of the harvest. In Manitoba, 4,422,000 bushels were saved or 10.09 per cent. of the harvest.

Grasshopper infestation wrecked a loss of 14,343,000 bushels of wheat; in Alberta, 3,997,000 bushels; in Saskatchewan, 6,344,000 bushels, and in Manitoba, 4,002,000 bushels.

Discovery Is Interesting

Old Indian Medicine Stone Found Near Kingston, Ontario

Announcement was made by W. Havelock Robb, of Abbey Dawn sanctuary near Kingston, Ontario, of an interesting archaeological discovery in the digging in the property of a big medicine stone, a sacred or ceremonial Indian medicine and corn mill, unique among such relics of past North American people, complete with grinder.

It is of hard, red granite, yet obviously resting in some strange manner, to a special design. The age of the stone is unknown, but it is believed to have been used by Indians in Champlain's time.

Squirrel Fights Hawk

Succeeds In Killing Bird After Duel In Air

A duel to the death in mid-air between a hawk and a squirrel is reported by an amateur naturalist in Schweinfurt, Silesia. On the border of a forest near the town, he saw a hawk hovering in clumsy circles close to the ground, with a small animal wriggling in its talons. Finally the bird plunged to earth. A moment later the observer saw a squirrel, bleeding from many wounds, drag itself free and scramble up a nearby pine tree. The hawk lay dead, with blood pouring from a wound in its throat.

Queen Is Puzzle Fan

Britons have learned their Queen is a jig-saw puzzle fan. Queen Mary with the Princess Royal, the Countess of Harewood visited the War at the Imperial Institution where handicapped of disabled veterans is displayed and spent several minutes at one booth playing with a jig-saw puzzle. She then bought it.

Now that modern science has produced cameras which will take pictures through a brick wall, those of us who have trusted brick walls to conceal some of our misdoings are becoming nervous.

In 1898, a waterpout 5,104 feet high was seen off New South Wales.

Sure Signs

Of kidney troubles are pain in the back, difficult urination, deposits in urine. Gin Pills relieve kidney troubles by gently soothing and healing the inflamed tissues. See a box at all drug stores.

GIN PILLS
FOR THE KIDNEY

Plug tobacco goes farther, because it lasts longer in your pipe. It's fresher, too, because the big plug doesn't dry out and you cut it coarse or flaky, to suit yourself.

PLUG SMOKING TOBACCO

The Trend of Population and Power

"Go West, Young Man." Such was the advice tendered by a great American to the youth of the United States back in the last century. It was based, probably, upon a knowledge of the vast resources and wealth of opportunities of that then largely unsettled area. It may also have resulted from a study of the movements of people throughout the ages of the past, pointing to the historical fact that "westward the course of empire takes its way." At all events it is interesting to note that, for some reason or other, the movement of this world's population is largely from the east to the west.

In the dim dark ages of the past, Europe was settled by the migrations of people from Asia; Christopher Columbus and the other intrepid navigators who followed him opened the way for the great movement of people across the Atlantic from the countries of the old world to the new western world of the Americas; and on this continent the trek of people has constituted a steady stream from east to west. We speak of Japan as the Far East, but even that the advice and slogan to-day in "Go West, Young Man,"—west into the new Japanese protectorate being carved out of Manchuria on the mainland of Asia.

In Canada we are, or necessarily, profoundly interested in this trend of population to the west. It has already had a tremendous effect upon national and economic policies in this Dominion, and it is certain to have an even greater significance in the years that lie ahead. Nor is it without its significance and value that this movement of population in Canada parallels the similar movement which has occurred and is still continuing to the south of the international boundary line of the 49th parallel.

The extent and rapidity of this western movement of population is revealed in a recent article in the Canadian Geographical Journal under the title "The Centre of Population Moves Westward," based on figures revealed by the census taken every ten years. As recently as forty years ago, (1891), only 7.25 per cent of the population of Canada was to be found in the four Western Provinces, but that percentage has risen by progressive steps until at the last census taking, (1931), 29.55 per cent of Canada's population resided west of the Great Lakes.

At the time of Confederation, the centre of population in Canada was near the city of Montreal; at the time of the last census in 1931 the centre of population had moved westward nearly 450 miles and was found to be located near Sault Ste. Marie, and practically 300 miles of this westward travel has taken place since the beginning of the present boundary.

Not only is the centre of Canada's population moving westward, but it is also moving northward. This is accounted for by two major factors—the opening of the vast mineral regions of the pre-Cambrian area, and the fact that the Western Provinces have in higher latitudes a more favourable climate. This movement of the centre of population steadily westward is, as already stated, having a pronounced effect upon both the political and economic life of Canada. Under our constitution, representation in the Parliament of Canada is based upon population; consequently the determining influence in national policies is steadily shifting westward, and the voice and views of the West becoming stronger. To-day, practically one-third of Canada's population resides west of the Great Lakes. If the same trend of population westward continues, albeit not quite so marked as since 1901, a few more decades will witness political power almost equally divided between east and west, with all that such equality in political power may mean in the national policies of the Dominion.

Coincident with this shift of the centre of population, and as the natural and inevitable result of it, the centre of manufacturing activity likewise moves westward. In 1890, the centre of manufactures was about midway between Kingston and Pembroke in Ontario; now, forty years later, it is about midway between Sudbury and Sault Ste. Marie, and is, therefore, only about 60 miles behind that of population, whereas in the United States the centre of manufactures is nearly 180 miles behind that of population in its westward movement.

Thus as political power moves westward, so does economic power as represented by investment in and output of manufacturing industries, while, of course, such economic power as represented by the output of western agriculture has increased in far greater ratio. For example, in 1891 British Columbia had 46 per cent. more capital invested in manufactures and 30 per cent. more value of product than the three Maritime provinces put together, and the Port of Vancouver served about 35 per cent. more shipping than the Port of Montreal; furthermore during the past ten years Vancouver showed much more rapid growth than did Montreal.

With the opening up of the northern mineral areas of Manitoba, Saskatchewan and Alberta—which gives promise of being the next major development in the West as it was in Ontario and Quebec in recent years,—and with the development of the Churchill-Hudson Bay route, major changes will take place in the economic relationship as between east and west and further impetus given to the western movement.

Such developments are bound to have a marked effect upon both the political and economic life of this Dominion. It is true that as the centre of population and of manufacturing moves west the counter pull of the east increases, and it is to be expected, therefore, that the westward movement of those centres will not be as rapid as in the years of heavy immigration and the settling of the prairie areas. But the northern development of the western half of the Dominion will assist in maintaining the western movement. The advice and slogan to youth to-day is not merely "Go West," but also "Go North."

Rubber From Flowers
Herman E. Pittman, chemist of St. Louis, is seeking to obtain patent protection for a formula by which he claims 60 per cent. of the rubber requirements of the United States may be extracted from a species of the poinsettia. The plant, common as a decoration at Christmas time, thrives in southern states.

Job For Someone
Anyone with experience in running railroad cars or ice cream sundae might find a job in Poland where identifications are needed for 42,000 farming communities. The names, once chosen, will be permanent. Five years ago 142,000 of these projects were sprung up and about two-thirds of them were named. It is for the others the government now seeks names.

Three Sugars In Honey
Levulose (fruit sugar), one of the three sugars found in honey, is non-granulating and is usually the predominant one. The other two sugars are dextrose (grape sugar) and sucrose (cane sugar). Dextrose is a rapid granulating sugar. Sucrose is present in honey only in very small quantities.

Approximately 11,800,000 words are spoken by the average man every year.

Says Production On Farms Should Be Governed By The Requirements Of The Market

Consumer research and adaptation of its findings to production were advocated as the solution of agricultural problems by Dr. Horace Barton, deputy minister of agriculture, in an address. He was speaking at a dinner of the eastern Ontario branch of the Canadian Society of Technical Agriculturists.

"Consumption has been taken too much for granted in the past," the government said. "It should be examined thoroughly in all phases. Canadian farmers should find out what appeals to Canadians and direct production accordingly. They had been looking too much to the export market."

Service to the consumer should be the object of all production, Dr. Barton believed. This solution he placed in opposition to three previously advanced solutions for glutted markets of alternative production, control of production and elimination of production or surplus.

Cost of marketing was relatively higher than production cost, he declared. There were too elaborate facilities in a very complicated marketing machinery, though necessary to transfer produce from 750,000 farmers to 10,000,000 people. Although there had been a tendency to centralize marketing, the farmer was having less and less to do with it. "The farmer does not understand the system, but he must produce to live and he had no alternative but to accept the price offered."

Marketing was a neutral state and the only approach to the problem was through a research-minded material of the problem should be investigated, examined and analyzed.

Great Britain was determined to bring her farmers back to prosperity and to carry out the provisions of the Marketing Act, said E. D. Barrow, former minister of agriculture in British Columbia. He recently returned from a visit to the British Isles. Already improvement was to be seen among the farmers.

Has Lost Three Fortunes

American Woman Now Sells Matches On London Streets

She sells matches now at a London pitch and has done so for eleven years. Miss Katherine Lucile Foote has spent three fortunes and will not go back to America poor.

Miss Foote is one of the few London street characters with a true American accent. Her father was a colonel and her mother a society belle from Washington. On her 20th birthday she was on the stage, with a brilliant future in promise. She worked up from an American three-shows-a-day circuit to London stardom. Marie Tempest, Ellaline Terris and Seymour Hicks knew her and she was with George Olvades for three years. She was playing as star of the Gaiety the day before embarking on a 20 weeks' tour of Australia.

She came the first of her marriages, to an Australian. He died and left her \$100,000. She married the nephew of the then lord mayor of London, and he died too. She had a second fortune. Her third husband was Isidor M. Weiss, a wholesale tobacco merchant, who died and left her a third fortune.

Then, after many losses at Monte Carlo gaming tables the end came. She was too old for any other work, and selling matches gives her sufficient to live on.

An Unusual Banquet

Guests in Paris Asked Chef Secrets Of His Recipes

Porcupine salad was one of the many exotic dishes served to members of the National Acclimatization Society at their annual banquet in Paris. Other dishes were: A whole porcupine served on a silver dish. Bamboo shoots from China prepared with black mushrooms; buffalo and antelope steaks; green oranges from the Quines coast, and candied fruits from Tahiti. Several women guests had to persuade the chef to tell them the secrets of his recipes afterwards.

A Good Anyway

"Well, my good fellow, this is a great universe. It is known in every corner of the world. When you leave here you can be proud of your background. Think of it. You have had every advantage a young man could desire. Your four years have been spent in profitable pursuit of the greatest thoughts of the greatest minds the world has known. Now the time has come for you to choose a profession. The world is entitled to expect a lot from you. What are you going to turn your hand to?"

"I've got a job at a pickle factory."

All classes of livestock in Ontario in 1934, according to the June survey, show decreases as compared with 1933—horses (563,700) 1.9 per cent; cattle (2,494,500) 1.2 per cent; swine (1,177,800) 6.8 per cent; and sheep (962,300) 4.0 per cent.

Airplanes cannot fly in an inverted position for any great distance.

W. N. U. 2074

Practice Should Be Stopped

Children With Fantastic Names Are To Be Fined

A Cloubern (Tex.) daddy named Ford has named his latest son V-S which puts him one, or maybe two, up on Philip Washer and his Missus of Niagara Falls, N.Y., who seven years ago named their offspring Lindbergh Airplane. This practice of slapping warped Christian handles on helpless babies is widespread, and seems to be growing no less so at the rate of at least a name a day. In Harrison, N.Y., Pasquale Tantorelli did his best to perpetuate the memory of the nation-wide low state of affairs by calling his son Depression Tantorelli. In the Bronx, Joseph Jacobson went almost as far by calling his daughter Norma Depression Jacobson. In England, they report a lot of girls make no objection to being named Philadelphia. Other odd names draw cheerful smiles from the owners, some of them being Frankie Foote, Lucky Starr, Pussy Catt, White and Gentle Lamb and—honest to goodness—Jolly Death. These are, of course, names anyone would smile at, and the owners only accept a general habit when they beam. It must be that the smiles were fewer in a social settlement house in Cleveland, where they found Marietta Pickle, Etta Bird, Eric Canal Johnson and Victoria Review Bailey.

Incense Still Fragrant

Produces Aromatic Fumes Although Believed 2,000 Years Old

Incense more than 2,000 years old has been found by archaeologists in the Baltic sea bank near Taganrog on the Sea of Azov. The incense, a mixture of pitch and vegetable oil, still produces aromatic fumes when set burning. It was found in a number of ancient black lacquer vessels in the site of a Scythian burial ground dating from the second or third century B.C.

Suggests Development Of Handicraft Art

Makes For Contentment In Rural Communities States Guild Head

Development of handicrafts in urban centres to provide remunerative employment for jobless who are capable of this work was explained at Saint John, N.B., by Col. Wilfred Bovey, director of extra-mural relations at McGill University and president of the Canadian Handicrafts Guild. He was asked by the Saint John board of trade to supply information regarding the promotion of rural and urban handicrafts in other parts of Canada.

"Toronto has an important development of this kind under a Miss Pitts," said Col. Bovey. "She found that a large group of unemployed had considerable capacity to design and produce saleable articles, and organized a crafts workshop in a big empty building. It would not require much organization to duplicate that scheme in many other cities."

In Montreal a group of young men, graduates in architecture from McGill University, were making articles of wrought iron and doing a good business. A previously unemployed country carpenter in Quebec found he could carve excellent statues and p'acques, and with the help of the Canadian Handicrafts Guild had become quite famous.

Col. Bovey termed craftwork one of the greatest factors in contentment of a rural population.

"To be relieved," he said, "nothing has so much effect on the country person. The foreign communities in Canada are the ones where the agitators try to find fertile soil for the seeds of unrest, but if they take a foreign community where there is a well established life, they haven't much of a chance of doing any harm, because handicrafts will keep the community happy and contented."

A Nine-Year Honeymoon

German Couple Has Covered More Than 100,000 Miles

After being on the road for nine years and travelling more than 60,000 miles, a German couple, Herr F. Hecker and his wife are on their way home from Calcutta to Munich. They left Germany in August, 1925—almost immediately after marriage. They travelled on foot through Belgium, France, Spain, Austria, Italy, Greece, Bulgaria, Turkey, Syria and Iraq. In Baghdad they were presented with two bicycles.

When they rode to India and reached Calcutta in July, 1930. From Calcutta they went to Burma, Siam, Malaya, China, Japan, and the Philippines. Now they are back in Calcutta, and intend to make their way home to Germany. Their route will be through Northern India, Arabia, Africa and so to Europe. They hope to reach Munich in 1937.

As a memento of their tour, they have a magnificent Alsatian dog, which was given to them in China. It is their constant companion.

Observations Were Useful

U.S. Dairy Industry Department Discovers Facts About Making Butter

Each fat globule in cream carries an electric charge investigators in the dairy industry department of the University of Wisconsin have discovered in an investigation into the time it takes to make butter out of cream. They found this time varied with the degree of acidity of the cream, and that the amount of electricity also varied with this factor. There is no danger of getting an electric shock from drinking a glass of milk or from the more concentrated charges in a pat of butter, as experience has shown. They found that the observations were useful nevertheless, less because it gave them a means of controlling the fat losses and in reducing the time required to make butter. The less acid the cream the stronger the negative charge on the fat globules. The more acid the cream the less negative was the charge, and finally a point was reached at which the decreasing acidity resulted in an increasing positive charge on the globules.

Twenty-Six Million Eggs

Most Profitable Of Food Fishes Is The Ling

The ling, the most prolific of food fishes, lays over 26,000,000 eggs during the spawning period while the herring only averages 36,000. The turbot is the second most prolific fish, averaging 9,000,000 eggs while the cod comes next with 5,000,000. All this seems contradictory when one considers the millions of herrings landed annually compared with the number of other fishes. The reason is that all the eggs laid by these fish do not come to maturity. The eggs of the ling for instance, float on the water and many are eaten by other fish. The herrings' eggs sink and thus escape destruction. The amount of fish landed in Britain last year was 16,116,132 cwt., valued at £13,981,546.

"If only," she blazed when the quarrel was at its height, "if only I were a man . . . or if only you were . . ."

MILK DISTRIBUTED IN LONDON'S SCHOOLS

This photograph was taken when a scheme was inaugurated for the supply of milk to school children in London, England, at one cent a bottle. In the picture is Right Hon. Walter Elliott, British Minister of Agriculture, enjoying one of the bottles of milk with some of the children.

The Friendly Fish

Just Like Domestic Animals Says Keeper At Aquarium

"Fish become as friendly as domestic animals, when you get to know them," is the belief of Fred Brown, for 55 years a keeper at Brighton's aquarium.

Mr. Brown whistles near the tanks and the fish—of numerous varieties—swim towards him immediately.

Mr. Brown, who is retiring, was one of the first men to have performed sea lions.

"Fifty years ago," he said, "they used to eat fish out of my mouth and obey my commands. About 40 years ago we had a thousand-pound whale in a tank. I became very friendly with him, and he used to eat out of my hand. Porpoises are supposed to be very shy, but we had one, 'Peter,' who used to come up and eat fish out of my hand. Peter obligingly swam through a hoop when I held it in the water for him."

When Mr. Brown goes, the fish will lose one of their best friends. He knows what they like to eat, nurses them back to health when they fall ill, and has saved the life of many of them when they have been attacked by companions in a tank.

Potato Yield Higher

All Provinces, Except Saskatchewan And Alberta Show Increase

An increase of 5,447,000 hundredweight in the estimated yield of potatoes throughout Canada, compared with 1933 is shown in the potato, root and fodder crop report issued by the Dominion bureau of statistics. This was due to an increase of 41,000 in the acreage and four cwt. in the yield per acre. All provinces except Saskatchewan and Alberta showed increases, particularly good harvests being reported from the Maritime provinces.

The hedgehog cactus of Mexico can live five years without a drop of water. When it rains it fills up its central pithy section until it swells to nearly twice its normal size.

The SNAPSHOT GUILD

BABY PICTURES

No doubt about it, the babies themselves "directed" these snapshots. In other words, they did as they pleased and the camera was clicked at the right instant.

There aren't any official statistics that we know of, so we're perfectly safe in saying that babies constitute the largest single group of snapshot subjects.

It's perfectly reasonable that this should be so, for we snapshot those things in which we are most interested. For another thing, babies make ideal subjects, because they don't pose. They're always natural. There are baby pictures and baby pictures, of course. Some are spontaneous snapshots of others are merely records, without much appeal.

Of course, the essential difference between the good and the merely so-so baby pictures. Usually you'll find, the good pictures show infants doing something—crawling, chewing a doll, wrestling with toes, or even in a fit of good cry. The merely so-so pictures give you only recognizable glimpses of babies doing nothing much at all.

First, it's possible to take a picture of a sleeping baby and get a charming result. But to do this, the camera work must be unusual. Very, what about the technique of baby pictures?

First, you'll need to have light enough for action pictures. Few babies stay still long enough for time exposures. Out-of-doors, you'll have no trouble at all working in

open shade or out in the full light, providing it's not so bright that it casts unpleasantly sharp shadows or causes the baby to squint. Use a regular snapshot time and lens opening.

This time of year, of course, it may be more convenient to work indoors. One of the easiest ways to take baby pictures indoors, during the daytime, is to get the subject fairly close to a big window (not necessarily a sunny one) and then use a photoflood-type lamp to light up the side of your subject that is away from the window. A photoflood bulb in one of those inexpensive reflectors will be found very handy for this and other indoor shots. If there's a lot of light coming from the window, you're able to use a regular snapshot exposure. For surety's sake, better work with the lens at its widest aperture. Wait until your subject strikes an interesting pose, then click the shutter and the picture's yours.

Don't forget that you can use super-sensitive film to get beautiful action shots with much less light than other films require. And let your baby subject "direct" his own picture. Let him do as he pleases, with only slight suggestions from you. So doing, you'll get real looking, satisfying pictures. And you'll always treasure them.

JOHN VAN GUILDER

Central Seed Cleaning Plant System Developing Steadily During The Past Ten Years

Modern Craze For Speed

Has Become Sort Of Disease With Some People

Citing speed records made by trains recently the Ottawa Journal asks "Why the hurry?" In these days, the Journal says, a person may pick up a telephone and speak to anybody at almost anywhere, or send a wire, so it can't be terribly important that he may get to a destination a day or a few hours sooner than ordinary, shooting along at 118 miles an hour on a train weighing thousands of tons to do so.

Isn't it the truth that it's the man who is usually going nowhere in particular or who has time to burn on his hands who has the greatest craving for speed? Take some motorists. They will drive like fury through the country passing everything in sight and at the end of the journey'll find hour after hour of time doing nothing. The man who has a real honest-to-goodness mission to fulfil generally takes a reasonable amount of time to make the journey; his chief aim is to get there safely.

This craving for speed has become a sort of disease with some people. It isn't fatal, however, to find fault with the railroads for creating faster trains. They have to cater to people who want speed and if those people do not receive such service from the railroads they will patronize the airlines or whatever else gets them through space in record time.—St. Thomas Times-Journal.

Secret Of His Success

Great Polish Pianist Practices Many Hours Every Day

Ignace Paderewski was, and possibly still is, the greatest piano player in the world. At any rate his name is surrounded by more glamour than any other pianist living, and despite the fact that he is nearly 75 years of age, he is the greatest drawing card before the public so far as piano art is concerned.

A noted New York music critic visited him at his home in Paris recently to see if he had anything to say about his forthcoming tour in the United States. "What am I doing?" he repeated, echoing the interviewer's question. "I am working hard to polish my technique."

So the mighty Paderewski is still trying to improve his technique. And there's a lot of great players before the public who feel that they would be better than they are if they could play even less well than the famous Pole.

The truly great artist is never satisfied. The truly great artist is constantly striving to do even better. Paderewski, who practices six or seven hours a day when preparing for a tour, says that if he misses one day's practice he notices a difference himself; if he misses two days the critics notice it; if he misses three days the public notices it.—St. Thomas Times-Journal.

War Fear Injures Trade

World Still Fails To Enthroned Right Above Force

Despite increased evidence of recovery in Canada and abroad, lack of exchange stability still aggravates return of normal international trade, declared Sir Robert Borden in his presidential address at the annual meeting of Barclay's Bank of Canada.

"The folly of attempts at economic isolation is paralleled, in a more dangerous and deadly aspect, by insane waste in war-like preparation, which retards cruelly and unnecessarily a piece of the recovery from chaotic conditions engendered by war," he declared.

"This waste, child of fear, suspicion and hatred, has spread like a creeping paralysis through the nations. Hitherto the league's effort to abate it have been in vain, not through lack of most earnest and patient endeavor, but by reason of humanity's imperfections. The world still fails to enthroned right above force."

It is not unreasonable to conclude that our country is gradually emerging from the mazes of depression, although continued progress may be slow and difficult. An age-old adage warns against triumph-song before victory."

Cooking Teacher (reviewing class in sandwich making): Take two pieces of bread, a layer of cheese, two slices of ham, a spoonful of mayonnaise, a piece of lettuce, and what have you got?

Bright Pupil: A tea shoppe.

Husband—Darling, I've bought you a marvelous washing machine. You just press a button and the work is done.

Wife—Um-hum, and who's going to press the button.

Londoner: "I went bald, so I spent a small time in the hair restorer."

Aberdonian: "When I went bald I sold my brush and comb."

Eternal effort is the price of safety on modern highways.

The seed grower who markets his seed cleaned and graded has the same status as the manufacturer who turns out a finished article and thereby realizes the highest return for his product. Further, the farmer who sells a finished product has a definite incentive to produce the best, while on the other hand the low prices obtained by weed infested crops constitute the hard lesson by which the grower learns to improve his methods and produce cleaner crops.

Comparatively few farmers are equipped with the means for properly cleaning the seed they grow. The carefully operated fanning mill will clean grain satisfactorily only when the common impurities are to be taken out. But under the ordinary farm conditions it is almost impossible to accomplish similar results with clover and timothy seed. Fortunately, the central cleaning plant system has been developing steadily during the past few years, and has become a highly specialized business in several areas, particularly in the Ottawa Valley district. These central cleaning plants, equipped with several types of machines for cleaning grain and equipment for cleaning clovers, grasses, and other farm crops, are performing services of inestimable value to the various communities, more especially to the farmers who have seed as a cash crop. The plants are being operated successfully at moderate rates for seed cleaning and have been established either with or without government financial assistance. A three-unit plant, provided with complete machinery and equipment, is equal to the seed cleaning requirements of most farm communities and costs about \$1200.

Added to the advantage of being able to grow bigger and better crops, the seed producer, particularly of clover and timothy, owes a further benefit to the central cleaning plant. His seed, well cleaned and brought to the highest grade obtainable by the skillful use of the most up-to-date machinery, can now be marketed at its full value, while growers who are obliged to sell their seed in the rough are realizing returns from 25 to 50 per cent less. This contrast was fully demonstrated this season, growers in the Ottawa Valley realizing as much as from 15 to 21 cents per pound for timothy seed, cleaned and graded No. 1, while in other parts of the province of Ontario farmers are reported as receiving 10 cents per pound for seed of similar quality, but uncleaned.

Raising the standard of the seed used of both grain and forage crops, with increased yields, is a result directly attributable to the central cleaning plant in every community which has been established, and in the Ottawa Valley, apart from the fact that the 24 central cleaning plants in 1933 turned out 75,000 pounds of grass and clover seed, valued at \$1,100,000. In 1934, seed sales as Certified No. 1 grade, 8,000 bushels of cereal seed of Registered grades, the improvement in yield and quality through the cleaning plants was extended to barley growers as well. Large quantities of high class barley are now being produced in that area and are now finding a ready and profitable market with malting companies in Canada. The malting companies accept the grain without cleaning before shipping, over 200 carloads of barley being shipped out of the Ottawa Valley in 1933, and more than 250 from this year's crop.

For Western Representation

Want Two Directors For Bank Of Canada From Prairie Provinces

Selection of two directors for the Bank of Canada to represent Manitoba, Saskatchewan, Alberta and British Columbia was urged by the Saskatchewan Board of Trade in a telegram to the Canadian Chamber of Commerce. Executive members of the local board felt that the large number of shares of bank stock held in Ontario and Quebec might result in the election of an eastern directorate unless prompt action was taken to get a national organization interested in securing representation for all sections of Canada.

Representation of two directors on a board of seven, it was felt, would adequately represent Western interests, and would approximate the number of shares held in the four provinces. The Canadian Chamber of Commerce would favorably consider the request, it was believed.

Scotland Likes Canadian Eggs

The following is an extract from a report by the Canadian Trade Commissioner in Scotland on recent shipments of Canadian eggs to that country: "The consignments state that the Canadian egg has full turned out very well indeed, and are a credit to Canadian shippers. They hope that the shippers will keep up this high standard of quality and thus help to encourage the trade."

Great Britain has contributed about \$7,000,000 towards maintaining the League of Nations.

More than 467,000 tons of water pass over Niagara Falls every minute.

BASHAW WINS

Bashaw took the long end of a 4-3 score at that place on Tuesday night in a league fixture against Lacombe. Fans who attended the game say it was lightning fast and thrilling right from the bell. The score was by no means an indication of the game. The local team had it over Bashaw like a cat. They say that penalties lost the game for Lacombe and how that Bashaw referee did hand them out. Four minutes for an accidental trip, four minutes for a body-check below the blue line in fact all the penalties dished out were around four minutes. Lacombe got 22 minutes while Bashaw merely drew 4 minutes in penalties in the game.

The boys are not kidding, but wish to make it known that when Bashaw arrives here on Saturday night, they are going to show them a little bit of hockey-playing. The locals are out to win and that means they will win. Fans are sure of a bang-up game Saturday. The local boys are hitting their stride now and will put everything they have into the game on Saturday night. Don't miss this game—it will be interesting. Owing to the fact that many of the hockey fans work late Saturday night, the management have arranged to have the game begin at 9:45. So when you finish working you will have time to see the game.

LACOMBE FORMS

A Junior hockey league has been organized in Lacombe and if a relatively strong team can be developed they will likely be entered in the provincial finals. The following officers were elected: honorary president, G. T. Jackson; president, Alf Price; vice-president, John McDonald; secretary treasurer, G. E. White; directors, Len Douglas, Howard Landon, George Sheets; manager, F. G. Robinson.

SPRUCEVILLE NEWS

There will be a novelty dance in the Hall, Friday, Dec. 28. Music by Wright's Orchestra. A good time assured. Mrs. Boyd Crocker is spending 2 weeks with parents at Alix. The P.A. had their annual meeting in the hall on Tuesday evening, December 19. The following officers were elected for 1935: President, Gordon Flack; Vice-Pres. O. S. Young; Secretary-Treas., Nelson Hall.

ST. ANDREW'S UNITED CHURCH

Rev. R. B. Layton, Minister
Mr. L. D. Wright, Musical Director
There will be special music at both services on Sunday. In the evening the choir will sing "Song of the Harvest." The Sunday-School meets at 11 o'clock.

MARRIED

On Dec. 19, Sighe de Jong of Clive to Minnie Eleanor "Mona" of Clive. The witnesses were Mrs. Cora T. Gochwenter and Hyde de Jong both of Clive.

We Wish Our Many Friends in the Lacombe District a Very Happy and Enjoyable Christmas

BENEFIT DANCE SUBSCRIPTIONS INCREASE

As we go to press, the latest returns for the Benefit Dance Fund is almost \$200.00. The amount subscribed last year was \$100.00—it looks like the dance will far surpass last year's total. Remember, you can still get a ticket at the Adelphi Hotel or from The Western Globe office. All those who have tickets should not fail to attend this great dance.

Remember the Hockey Game Saturday night—Bashaw vs. Lacombe.

Miss Nellie Pennock, daughter of Mr. and Mrs. F. B. Pennock returns to Lacombe on Wednesday last after spending six months in the U.S. visiting her sister, Mrs. Earl Fiedler, of Salem, Oregon, and other relatives and friends.

Lacombe hockey team plays at Stettler. The boys look forward to a win.

THE TENDERFOOT

By GEORGE R. ROONEY

Author of "The Coronado Trail," "The Canyon Trail," etc.

SYNOPSIS

"You've fallen out to a half-share in plenty of trouble," the lawyer told Gerald Keene. "The Broken Spur has been systematically looting the ranch, and old Joe Carr, your partner, is drinking himself into ruin."

But Keene decided to do as what was happening for himself—not as Gerald Keene, half owner of the Broken Spur ranch, who had been systematically looting the ranch, and old Joe Carr, your partner, is drinking himself into ruin."

End Keene decided to do as what was happening for himself—not as Gerald Keene, half owner of the Broken Spur ranch, who had been systematically looting the ranch, and old Joe Carr, your partner, is drinking himself into ruin."

End Keene decided to do as what was happening for himself—not as Gerald Keene, half owner of the Broken Spur ranch, who had been systematically looting the ranch, and old Joe Carr, your partner, is drinking himself into ruin."

End Keene decided to do as what was happening for himself—not as Gerald Keene, half owner of the Broken Spur ranch, who had been systematically looting the ranch, and old Joe Carr, your partner, is drinking himself into ruin."

was stopped by Edith. She was in riding dress and she was eating a hasty sandwich.

"If you're sending him," she nodded at Stone—"out to ride fence, I can show him. I'm going out for a ride and I may as well ride that way. Come on."

Stone followed her out to the corral where his pony stood saddled, and Lee brought Edith's horse from the stable. Two minutes later they plodded their way across the East pasture with the two thousand acres to ward the West line.

That West line ran for miles straight North over a yellowing grass mesa. There were many breaks in the wire that there had been no men, or too few, to repair and many posts were down. From time to time Stone dismounted, whistling, reset his posts, staped his wire and made the ends fast, and Edith watched every move he made.

Mile after mile that rode was checked off in red letters in the diary of his life. He had seen many women but never one like this. Her eyes were bright with the wine of the West. . . . And there is no wine fermented by mere man that is like it. . . . Her lips were redly parted and her cheeks were aglow with a light that has never been seen but by those whose eyes are opened by the gods. She gave to every motion of her horse and rode, a perfect poem, across that sunlit mesa under Duro Stone's adoring eyes. He had never believed that such a woman lived west of the Pillars of Hercules. Himself, fairly well read in the classics, he repeated these lines that Marlowe wrote:

"The face that launched a thousand ships
And burned the toplest towers
Then he turned to her. . . . Heisen . . . Edith . . . He did not care at all about the name. That was quite incidental. But he never got a chance to say what was on his mind.

Far below them, below the slope of the hill, a pool of quiet dark water showed like pre-ordained silk under four great cotton-wood trees. A few cattle stood far off on the slope of the hill.

"Look there," Edith pointed to the great sweep of the land before them. "You've been with us only a few hours but you must have heard the trouble that we are having."

He nodded. His gaze seemed to center on his horse's ears but he was always conscious of the golden voice.

"It's just hard luck," she said. "Hard luck and our own mismanagement."

"Thank God," he thought. "Here is one person sense enough to realize that Fate doesn't sit up at nights to deal us bad hands. She gives us brains to be used. . . . Aloud he said:

"It's a good land but she sure doesn't show much cow-life."

"Let's eat our sandwiches here," she suggested as their ponies hurried them through the brush toward the water, where the springs of those troublesome Soda Springs caught the sunlight. She slipped the bit from her horse's mouth and watched him thrust his muzzle deep in the pool. Then she smiled at Stone, who had dismounted on the "off" side and stood awkwardly watching her.

"You're entirely new to the range work, aren't you?" She pointed accusingly to his unsaddled pony. "We don't, as a rule, unsaddle at work. Might need the pony quickly. It's just a hint. You understand?"

"Oh, yes, and thank you. I'll need a lot of hints. I thought the horse'd like to rest. It seemed tired."

"For Heaven's sake don't call your horse 'It,'" she flared at him. Then she smiled at him again. There was a refreshing ingenueness about this new hand that amused her. But why under Heaven should any man take up such a life? If her father, who had been a cattleman for more than fifty years, could not succeed, how could an amateur like this man Stone look for success? She felt vaguely sorry for him.

"How do you make out in the bunkhouse last night?" she asked. "Sometimes Balzac thinks he's a qualified practical joker."

"He put some sand-spurs inside my shirt," said Stone. "But he was right pleasant about taking 'em. Afterward I rubbed his nose in 'em."

She laughed a little and to her own astonishment found herself flushing warmly under his eyes.

"I wouldn't let my horse eat all those fox-tails," she said in operation. "They'll make his mouth sore."

"Look! There's a cow over there. The first I've seen to-day."

A big dun cow trotted through the heavy brush followed closely by a hawking calf that struggled for its natural rights. They watched the cow as she flung into the pool with the

calf banging at her flanks, and Edith's face suddenly hardened.

"Look at that cow," he said quickly. "That's one of our Hour-glass cows. . . . Now look at the calf. . . ."

"Well. . . . Stone looked the calf over leisurely.

"Don't you see it's got the Broken Spur brand? Haven't you ever read any Western fiction while you were trying to prepare yourself to be a cow-puncher? Don't you know that a cow will only raise her own calf? Haven't you ever heard that?"

"Come to think of it, I believe I have," he said slowly. "But . . . look. The cow's a Broken Spur cow, too. . . . There on her hind shoulder."

She laughed at the words but she was studying the calf. The Broken Spur brand stood out red and angry.

"Here's your first lesson," she said. "I can see exactly what has happened. Whoever was doing the stealing, got the calf first. Then when the calf was branded, they had to change the brand on the calf. . . . If they'd wanted the calf it would have shown they'd been tampering with brands. Do you know what a running iron is?"

"Kind of a crooked iron poker, isn't it?" he asked innocently.

"Something like one. I hope you never have to use one. It's used to renew brands. . . . Or to steal cattle. It just happens that I know that cow. She's one of our blooded stock and was a milk-cow at the ranch. Every mile of the Hour-glass knows her. Why, her flank is hot yet from the iron."

(To Be Continued)

Reduced Danger of War

Would Virtually Confiscate Incomes In Event Of Declaration

Senator Gerald P. Nye, of the United States, chairman of the recent Washington munitions investigation, told the Empire Club at Toronto, he would reduce danger of war by virtually confiscating incomes in the event of its declaration.

Senator Nye said: "One thing is to destroy absolutely any possibility of private property from this thing we call national defence. The way to do this is for governments of the world to institute hard and fast, iron-clad monopolies on the principal instruments of national defence, including guns, aeroplanes and some of the basic chemicals used in munitions."

"Then let every government write into its income tax law that in the event of war the tax on incomes up to \$10,000 a year will be doubled and taxes take 98 or 99 per cent. of all incomes in excess of \$10,000."

"Then you will see decreases in the numbers of those who see that the way to economic recovery is to have another little war."

Wins Coveted Honor

Chemist Awarded Nobel Prize For "Heavy Water" Discovery

Dr. Harold C. Urey, who was awarded the 1934 Nobel prize in chemistry, won this honor for the most stunning chemical discovery in a century, which the public knows under the name of "heavy water."

The young scientist, professor of chemistry at Columbia University, greeted the announcement from Stockholm with a sigh of relief.

"After all the rumors of the past weeks," Dr. Urey said, "it's a great relief to have it settled."

"Heavy water," the popular name for Dr. Urey's discovery, is made out of heavy hydrogen, or hydrogen atoms twice as heavy as the hydrogen formerly known. It was this discovery and isolation of heavy hydrogen atoms, technically called "isotopes," that won recognition for Dr. Urey at the hands of the Nobel board.

An "isotope" is an off-weight atom. That is, all the atoms of the same chemical elements have standard weights. Mixed with many, perhaps all of them, are off-weight atoms which are either lighter or heavier than standard.

Until shortly before Dr. Urey's discovery, it was almost undreamed of that there could be an off-weight hydrogen atom. The standard weight of hydrogen, the lightest of all elements, was only 1. Any off-weight hydrogen, or "isotope" had to be 2.

"Urey will receive a cash prize of approximately \$40,000."

Advance In Science

Positive Immunization From Infantile Paralysis Is Claimed

Positive immunization of children against infantile paralysis has been accomplished by the New York City health department, Dr. William H. Park, director of its research laboratory, announced.

Vaccine obtained from experimentally-infected monkeys, he said, made a group of 25 children immune from the disease, but the research scientists are still studying the duration of the immunity. Blood tests, made six weeks after the children's vaccination, showed a satisfactory degree of immunity.

Mother (to junior): "If you don't be a good little boy I'll call a policeman."

Junior: "And if you do I'll tell him we've got a dog and no license."

Two caps on a milk bottle keep over more contamination than one cap is the report from research workers to the American Journal of Hygiene.

CAN'T SLIP OR SLIDE FALSE TEETH

Don't use any old kind of remedy to keep false teeth in place—use a reliable, scientific one. Dr. Wernert's Powder—the largest and the most reliable—gives teeth so secure yet comfortable they feel natural. Positively no slipping or clicking—no secure yet comfortable they feel natural. Forms a special cushion to protect and soothe gums. No colored, gummy paste—keeps mouth healthy—lengthens life. Inexpensive—all drug stores.

Crossing English Channel

Commonplace Now But Once Considered Hazardous Feat

The English channel once was a formidable body of water, before which the venturesome quailed and whose crossing was on occasion a matter of historic moment, as in 1066 A.D. when William of Normandy led his army across the strait in just a few minutes longer than a jiffy. The first aviator to fly across, Blériot, in 1909, was chosen by the feat, but it is now a commonplace.

It is much the same with the channel swimmers. The first recorded swim was in 1875, and Capt. Webb held the Jone distinction for thirty-six years. Beginning of those years ago, the channel has been a virtual water carnival. Men, women and children have stroked and kicked their way across.

Crossing by sailboat, motorboat and rowboat route no longer. One German traveler even walked across by means of floats attached to his feet. The latest crossing was the channel's former terror. A Frenchman worked his way over in, on, a device known as a hydroplane, which is a ball a foot in diameter, through which a double paddle is passed. Next thing we know, election-bell losers from the continent will show how little they think of England's formerly reliable water barrier.

More Americans have crossed the channel by means of floats attached to their feet. The latest crossing was the channel's former terror. A Frenchman worked his way over in, on, a device known as a hydroplane, which is a ball a foot in diameter, through which a double paddle is passed. Next thing we know, election-bell losers from the continent will show how little they think of England's formerly reliable water barrier.

More Americans have crossed the channel by means of floats attached to their feet. The latest crossing was the channel's former terror. A Frenchman worked his way over in, on, a device known as a hydroplane, which is a ball a foot in diameter, through which a double paddle is passed. Next thing we know, election-bell losers from the continent will show how little they think of England's formerly reliable water barrier.

Detroit Ladies Destitute Through No Fault Of Their Own

The financial trials of the world are scattered with the wrecks of investment programmes. In each of them is a poignant personal tragedy.

The other day, four old ladies applied for old age pensions from the State of Michigan. Their ages ranged from 74 to 82. They are the daughters of one of Detroit's early and wealthy citizens—a man who was so well-to-do and so public-spirited that he donated to the city of Detroit the site on which the City Hall now stands. The property this family once owned is to-day valued at \$8,000,000, but the four daughters are practically penniless.

Here is presented the perfect opportunity to draw the moral of the value of thrift and investment. But when one looks into the circumstances one finds that the moral is sheer irony applied to this case. One of the daughters told newspaper reporters the other day:

"I don't believe we are to blame because we are destitute at our ages. Now take my own case, for example. I saved my money against old age. I was advised to buy bonds and so I bought them, real estate bonds payable through a Detroit bank. They are worth nothing now. I can't collect a penny."

This happened in Detroit, but the same thing has happened all over Canada. What an argument it is for the strengthening of companies legislation, the better regulation of securities selling and the promotion of high standards of competency and ethics in the investment business—Financial Post.

There is a seven foot fence that Mr. Henry Ford built around my 30-acre bird sanctuary, which takes in our home.

As my home is private property the same as any other, we have the gate open to the public every day except Sundays when the birds are at their best which is from November 15th to December 15th, and from March 15th to April 15th, and yesterday while I was patrolling the north part of the bird sanctuary, I saw a W. W. Canada Goose come walking in.

It came slowly down the drive and sat or laid down at the grade door of our home.

Three gentlemen were present including Mr. Andrew A. Gawley, the man with the steel gun, and Mr. W. W. Canada Goose came walking in.

CARS CRASH

An old truck and a car driven by George Coverdale, were in a mix-up near Blackfalds on Friday evening. While passing the car the hind end of the truck swung in and knocked the auto into the ditch and then followed it in. The car was badly damaged, but with the exception of slight injuries to one of the passengers, Miss Edith Moss, all escaped safely.

ANNUAL VESPER SERVICE

Each year sees an increase in the attendance at the Vesper Service held annually by the C.O.I.T. Groups. As parents and friends learn of the service they become faithful attendants each year. Last Sunday, the subject theme was of the shepherds. Those taking part in the service were: Miss E. J. Jace, Miss K. Newton, Miss D. Sweet, Miss M. Gilmour and Miss T. Kingsbury presided at the piano.

DANCE AT GULL LAKE

There will be a dance in Fernies Hall, Gull Lake on Wednesday, Dec. 26th, Wright's Orchestra.

IN THE MATTER OF THE ESTATE OF BLANCHE ETHEL ATTRELL, late of the Town of Lacombe, in the Province of Alberta, deceased.
NOTICE IS HEREBY GIVEN that all persons having claims upon the estate of the above named BLANCHE ETHEL ATTRELL, who died on or about the twenty-fifth day of August A.D. 1934, are required to file with the undersigned as Solicitor for the Executor of the said deceased by the twentieth day of January 1935, a full statement duly verified of their claims and of any securities held by them and that after that date the Executor will proceed to distribute the assets of the deceased among the parties entitled thereto, have regard only to the claims of which notice has been filed or of which notice has been brought to the knowledge of the Executor.

DATED this thirteenth day of December, A.D. 1934.
EDWIN H. JONES, K.C.,
Solicitor for the said Executor.
